

GL-010 INDOOR SMART GARDEN WITH LED GROW LIGHTS GENERAL INSTRUCTION GUIDE

There's no fix rules for gardening. Below is a general guide for reference

1. Unbox it	
2. 	Remove the sponge inside the pot
3. 	Sow some seeds onto the vermiculite. About 2-3 seeds per hole. Spray some water. Then use toothpick to gently push seeds into vermiculite. About 0.5cm to 1cm depth. Put back the cover. NOTE: If seeds do not germinate after 7 days, soak new batch of seeds for about 5 hours. Sow seeds again. DO NOT take seeds that float.

4.

Spray some water

NOTE: Spray some water whenever the surface is dry but not too much. Keep it damp but not wet

5.

Fill up water tank with **FRESH** tap water to the label.

Add **whole** bottle of 25ml fertilizer to the water and mix well.

NOTE:

1. Plant will have burnt tip when there's too much nutrient. So advisable to top up water only when the water level is low. It's about 500ml to 650ml of water needed for full top up.

2. Add 25ml fertilizer after 2-3 times of water top up depending of growth.

3. Change water when necessary. Add 25ml fertilizer after every change of water.

6.

Make sure LED grow light sit completely

7.

Push the plug all the way in and switch on the power. Set LED light to auto mode with 16 hours on and 8 hours off.

How to top up water?

1. Remove LED light from slot
2. Flip open the flipper
3. Pour water into the hole slowly
4. Push back LED light to slot. Make sure it sit completely

What to do if the LED light cannot be set 90 degree?

1. Just tighten both screws on the LED light

It beeps continuously even after I top up water. What should I do?

1. Firstly, lift up the pot to check whether the float is stuck. If stuck, use a toothpick to loosen it.
2. If problem persist, remove LED light from the slot when LED light is at its OFF mode.
3. Place it near the pot overnight
4. Push it back the next day. Make sure it sit completely.
5. If the beep persist, please contact us.
