

Using GL-010 Smart Garden to grow Microgreens

General Instruction Guide

There's no fix rules for gardening. Below is a general guide for reference

Requirement:

1. GL-010 Smart Garden
2. Microgreen seeds (about 5 gram, depending on type of seeds)
3. Baking paper

Steps:

1. Soak microgreen seeds for 12 hours.
2. Fill vermiculite up to the step of the pot (if refilling). No need to use 9-hole cover.
3. Sow seeds onto vermiculite.
4. Spray water to damp vermiculite.
5. Cover pot with baking paper. Cut to pot size.
6. Spray water on the baking paper.
7. Set LED grow light to auto mode. Please refer to video in the website
8. Spray water daily on the baking paper.
9. Remove baking paper once sprout. Around 2nd or 3rd day.
10. Spray water daily
11. Depending on seeds, harvest when height around 5-10cm.
